Applications Statistics

Hardware Configuration

Software Information

Main Functions and Features

Real-time Monitoring

- Record screen snapshots of PC
- Replay history records at any time by the playback function
- Assign recording time interval of screenshots freely
- Monitor more than one computers at once

Operations Control

- Prevent the operation of unauthorized applications
- Prevent the visit of unofficial website
- Lock the computer
- Restart or switch off the computer

Usage Analyze

- Analyze the utility of computer resources such as applications run, website visited.
- Generate report in different formats
- Send analysis report to supervisor via Email

Obtain software and hardware configuration

- Obtain hardware details of a computer
- Obtain software list of a computer

Remote management of cross border offices

- Provide remote management on cross border offices through the Internet, just like managing local offices.
- Provide status report on remote computers through the remote management function.

User privilege control

- Assign password and user privilege to the selected users for security purpose.

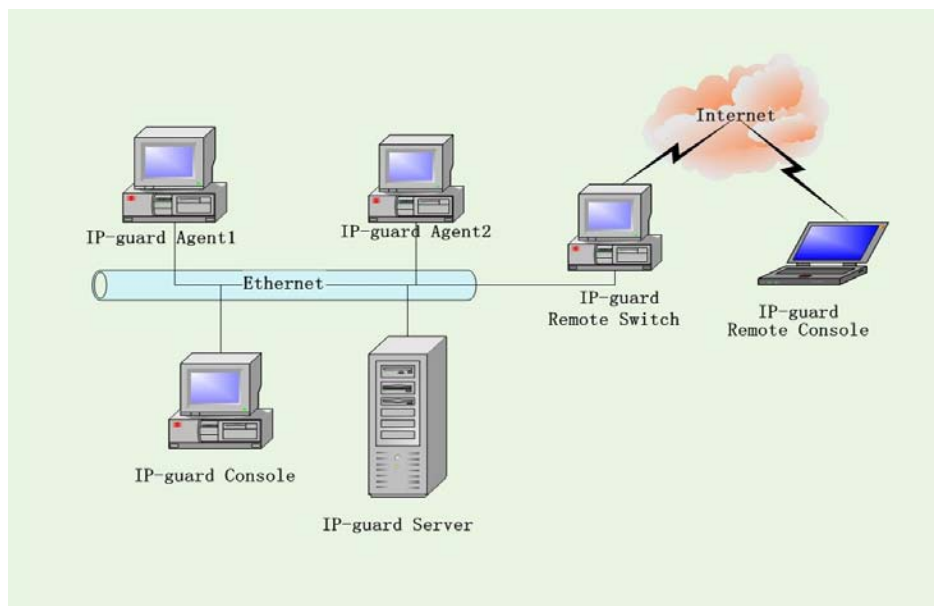

Backup

- Backup screenshots history in self-defined format
- Backup screenshots history in CD/DVD or tape

Safety Control

- Record document operations and control in details.
- Manage the use of the system resources

The basic structure of IP-guard:

IP-guard is composed of IP-guard Server, IP-guard Agent and IP-guard Console.

IP-guard Agent: install in the computer to conduct the real-time monitoring.

IP-guard Server: a server with high storage capacity, stores and manages the data gathered from IP-guard Agents.

IP-guard Console: control and manage IP-guard Agents; view and replay history; analyze and print report.

Superior Features

- IP-guard Agent is transparent to user which does not have any impact on normal operation.
- All component operations need user password. User is restricted on the unprivileged functions.
- It introduces an advanced way of 64-bit Data Encryption Standard (DES) which prevents information leaking while data is transporting through internet.
- High-powered data collection, compression and transportation. Reduce data size and transfer time.
- Automatically backup function which supports multi-backup device, such as tape drive, CDRW, DVDRW and network drive.

IP-guard is designed for a wide spectrum of industry sectors:

Manufacturing industries:

- Electronic and electrical household appliances
- Metal products
- Toys and plastics
- Textile and apparel
- Machinery and equipment
- Watches and jewellery

Service industries

- Call centers and logistics
- Insurance and banking
- I.T. industry
- Wholesale and retail sales
- Tourism, hospitality and leisure

IP-guard can help you:

Reduce Risk

- Reduce the risk of unauthorized transactions and communication of sensitive data.
- Ensure a positive work environment by eliminating inappropriate usage that may result in legal liabilities.

Optimize Management

- Preserve the access bandwidth for planned and intended network use.
- Simplify administration, maintain accountability and increase your awareness.

IP-guard technical requirements:

Operating System

- Windows 95/98/NT4.0(SP6)/2000/XP

Minimum Hardware Requirements

- Agent P166/16MB/10MBHDD
- Server P266/32MB/100MB HDD
- Console P266/32MB/100MB HDD

LAN Interface

- TCP/IP
